

Earth Observation for Vegetation Monitoring and Water Management: Naples, Italy, 10-11 November 2005 (AIP Conference Proceedings)

This book contains papers on the state-of-the-art of the application of satellite observations in the fields of irrigation, water management, and vegetation monitoring. The role of remote sensing from space and its usefulness in the analysis of important processes related to the hydrological cycle are presented with reference to real-world applications and ready-to-transfer operability.
