

# Defining Metonymy in Cognitive Linguistics: Towards a consensus view (Human Cognitive Processing)

While cognitive linguists are essentially in agreement on both the conceptual nature and the fundamental importance of metonymy, there remain disagreements on a number of specific but, nevertheless, crucial issues. Research questions include: Is metonymy a relationship between entities or domains? Is it necessarily referential? What is meant by the claim that metonymy is a stand-for relationship? Can metonymy be considered a mapping? How can it be distinguished from active zones or facets? Is it a prototype category? The ten contributions of the present volume address such core issues on the basis of the latest research results. The volume is unique in being devoted exclusively to the delimitation of the notion of metonymy without ignoring points of divergence among the various contributors, thus paving the way towards a consensual conception of metonymy.
