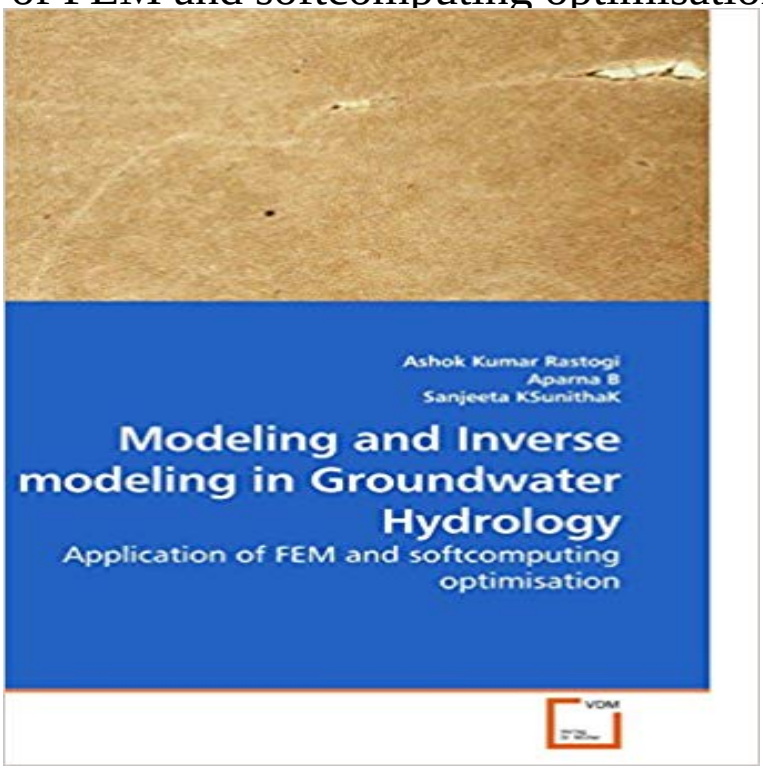
Modeling and Inverse modeling in Groundwater Hydrology: Application of FEM and softcomputing optimisation



Agricultural, industrial, municipal, navigational, and recreational demand of water is met by two major sources surface water and groundwater. Compared to surface water sources which depend upon the annual rainfall and the melting of ice and snow, ground water supply is more reliable because it does not directly depend on the annual rainfall. Therefore utilization of groundwater resources is growing over the years. However unplanned use of groundwater has caused several problems in many places. Groundwater modeling is used as a major tool to understand the complex dynamic behaviour of aquifer system. This required aquifer system parameters which are very difficult to evaluate by field methods alone. Inverse modeling helps in adequate assessment of these parameters. These aspects for certain specific cases are dealt in the book involving modeling and inverse modeling in groundwater hydrology.

Modeling and Inverse modeling in Groundwater Hydrology : Modeling and Inverse modeling in Groundwater Hydrology: Application of FEM and softcomputing optimisation **Modeling and Inverse modeling in Groundwater Hydrology** Buy Modeling and Inverse modeling in Groundwater Hydrology: Application of FEM and softcomputing optimisation by Rastogi, Ashok Kumar, B, Aparna, **Modeling and Inverse modeling in Groundwater Hydrology - Amazon** Centrifuge modeling of geosynthetic reinforced soil structures Aquifer remediation strategies Groundwater systems planning and management Inverse modelling of the aquifers Finite element analysis Analysis and control of vibrations Structural . and soft computing) Hydrology (neural networks and soft computing) **Modeling and Inverse modeling in Groundwater Hydrology - Flipkart** Nonlinear dynamics Stability and control Computational mechanics Solid Finite element analysis Analysis and control of vibrations Structural Hydroclimatology Bayesian hydrology Time series analysis and forecasting Soft computing in Groundwater systems planning and management Inverse modelling of the **Modeling and Inverse modeling in Groundwater Hydrology** Ru : Modeling and Inverse modeling in Groundwater Hydrology.
